Sudeep Adhikari Roll NO. 45

	Α	В	С	D	E	F	G	Н	- 1	J	K	L
1	In a sample of 250, number of smoker found is 75,Construct											
2		i)90% C.I. for Population Proportion										
3		ii)Construct C.I. such that Population P					ly lie.					
4												
5	Solution: H	ution: Here we have										
6		Sample size(n)=		250								
7	Number of	lumber of smokers(x)=										
8		Sample propn.(p)=			=D7/D6							
9		q=		0.7	=1-D8							
10		S.E.(p)=		0.028983	=SQRT((D8	3*D9)/D6)						
11												
12	For i)95% confidence interval for population mean											
13		Here, C.I. (1-α)=		0.9								
14			α=	0.1	=1-D13							
15		Ζ.α=		1.644854	=NORM.S.	INV(1-D14/	2)					
16	Now, Lower limit=		0.252328	=D8-D10*	D15							
17	Upper limit=		0.347672	=D8+D10*D15								
18												
19	For i)Certainly lie we should take											
20		Ζ.α=	3									
21	Now, Lower limit= 0.213052		=D8-D10*C20									
22	Upper limit= 0.386948		=D8+D10*C20
